You would like to reduce the cost of providing essential technology and communications services to your business and better manage and maintain it while also protecting your critical business information.

### JR SECURE Business Assessment – The Power to Know

SMBs must deploy and utilize resources efficiently to survive and thrive today. The demands of day-to-day operations may prevent examination of the effectiveness or cost of the technology supporting their business. Your Current State Business Assessment (CSBA) gives you the power to know. It examines your business systems and the related costs and delivers a complete, integrated view of your current state situation and costs. JR SECURE employs an interview and data collection process designed to glean relevant detailed information. The information is analyzed, synthesized, summarized.

The report assesses the maturity levels in five categories across six key business system domains fundamental to operations. The result is a complete view of what works, where the business is at risk and what it costs as well as what can be improved, where savings can be made and how the business could be made more secure and protected. Management is provided a road map to business enhancement and an action plan for implementation including post transition costs and operational improvements.

### Let us prove our value to your business.

The process starts with a demonstration of our services via video conference. We then perform a Current State Business Assessment to understand your existing requirements and cost so we can validate your savings and properly configure a system to your business. Next we'll provide you with an Opportunity Analysis report with the findings from the assessment and a proposal for our services identifying the enhancement and savings you can expect from Your Office Smarter.
